From an apprentice aircraft engineer, into a flying career. A commercial pilot flying Beaver's, DC3 Dakota, Vicker's Viscount and finally as a Training Captain on the Boeing B707. All with one airline although the airline's name changed with the changing political circumstances. Add an interest in flight safety and I finally retired as Chief of Air Accident Investigation in South Africa. Here I recall my 49 year career in aviation beginning in 1949. International Aviation Law: A Practical Guide explains the international context and application of the law as it applies to commercial and recreational aviation, and to the broader aviation environment. It provides a comprehensive introduction to all aspects of aviation law, from criminal law to contract law, to the legal duties and responsibility of aircrew and other aviation personnel including airport operators, air traffic controllers and aircraft engineers. Each area of the law is clearly explained in accessible language and supported with practical case studies to illustrate the application of the law within an operational aviation context. It also provides advice on how to avoid or minimize legal liability for those working in the aviation industry. Thoroughly revised and updated throughout, this second edition adds new material on subjects such as unmanned aircraft systems, ASEAN's Single Aviation Market, common rules on compensation and assistance to passengers, and a discussion on the impact of Brexit to the UK's aviation market and legal status.

Requirements Modeling and Coding attempts to bridge the gap between modeling and coding and serves the growing trend of agile development better than existing textbooks in the area. Instead of using toy tools to create modeling and coding examples, the author teaches IBM Rational Rhapsody as a modeling tool and Microsoft Visual C# as a programming tool. C# is the purest object-oriented programming language and the best tool for developing graphical user interfaces, while Rhapsody is a visual development environment that real software developers use to create real-time or embedded systems. This book serves as a text for a capstone course on Systems Analysis and Design in Information Systems programs. It conceptualizes business objects and functions, develops business models and software architectures, and enriches the models and the architectures by storyboarding use cases along with user interface designs. Instructor's resources are provided for free to instructors who adopt the book as textbook. Please send your request to sales@wspc.com.

Introductory chapters outline the workings of a press bureau office during a major story and present interview sections with key reporters on the story about how their role unfolded. Sidebar commentary alongside the reproductions of the news wires, organised by date and time, adds interesting discussion throughout the book, while a conclusion evaluates the coverage of the story. The Appendices include reproductions of Texas newspapers' resulting pages about the crash. This is a fascinating case-study of the dissemination of news date before the internet,
